MEDICAL & PATIENT ADVISORY BOARDS

Editor-in-Chief Charles M. Balch, MD, FACS, FASCO

Professor of Surgery, The University of Texas MD Anderson Cancer Center
Former Executive Vice President & Chief Executive Officer, American Society of Clinical Oncology
Past President, Society of Surgical Oncology

U.S. MEDICAL ADVISORY BOARD

James O. Armitage, MD
The Joe Shapiro Professor of Medicine, Division of Oncology/Hematology, University of Nebraska Medical Center
Past President, American Society of Clinical Oncology

J. Max Austin Jr., MD
Professor Emeritus of Gynecologic Oncology, Department of Obstetrics and Gynecology, UAB Medical Center

Al B. Benson III, MD, FACP, FASCO
Professor of Medicine, Associate Director for Cooperative Groups, Robert H. Lurie Comprehensive Cancer Center of Northwestern University

Thomas A. Buchholz, MD, FACP
Senior Vice President and Medical Director, Scripps MD Anderson Cancer Center
Emeritus Professor, Radiation Oncology, The University of Texas MD Anderson Cancer Center

Paul A. Bunn, MD, FACP, FASCO
Distinguished Professor and James Dudley Endowed Professor of Lung Cancer Research, University of Colorado School of Medicine
Past President, American Society of Clinical Oncology

Michael A. Caligiuri, MD
President and Physician-in-Chief, City of Hope National Medical Center
Past President, American Association for Cancer Research

Kaisorn L. Chaichana, MD
Associate Professor of Neurosurgery, Director of Skull Base and Minimally Invasive Cranial Surgery, Director of Brain Tumor Surgery, Mayo Clinic, Jacksonville, FL

Armando E. Giuliano, MD, FACS, FRCSEd
Professor of Surgery, Executive Vice Chair of Surgery, Associate Director, Samuel Oschin Comprehensive Cancer Center, Cedars-Sinai Medical Center
Past President, Society of Surgical Oncology

William J. Gradishar, MD, FACP, FASCO
Betsy Bramsen Professor of Breast Oncology & Professor of Medicine
Chief, Division of Hematology/Oncology, Department of Medicine
Deputy Director, Clinical Network
Director, Maggie Daley Center for Women's Cancer Care
Robert H. Lurie Comprehensive Cancer Center of Northwestern University

Frederick L. Greene, MD, FACS
Medical Director, Cancer Data Services, Levine Cancer Institute

Mario E. Lacouture, MD
Director, Oncodermatology Program, Professor of Dermatology, Memorial Sloan Kettering Cancer Center

Tanya W. Moseley, MD, FSBI, PMP, CMO/OE, CN-CP
Professor of Breast Imaging and Breast Surgical Oncology, The University of Texas MD Anderson Cancer Center

Lisa A. Newman, MD, MPH, FACS, FASCO
Chief, Division of Breast Surgery, Director of Interdisciplinary Breast Program, Weill Cornell Medicine, NewYork-Presbyterian Hospital Network
Medical Director, International Center for the Study of Breast Cancer Subtypes

John E. Niederhuber, MD
Adjunct Professor, Department of Surgery and Department of Oncology
Deputy Director, Johns Hopkins Clinical Research Network
Johns Hopkins University School of Medicine, Baltimore, MD
Past President, Society of Surgical Oncology
Past President, Association of American Cancer Institutes
Former Director, National Cancer Institute, National Institutes of Health

Nicholas J. Petrelli, MD
Bank of America Endowed Medical Director, Helen F. Graham Cancer Center and Research Institute, ChristianaCare
Past President, Society of Surgical Oncology

Raphael E. Pollock, MD, PhD, FACS
Director, The Ohio State University Comprehensive Cancer Center
Kathleen Wellenreiter Klotz Chair in Cancer Research
Past President, Society of Surgical Oncology

Richard B. Reiling, MD
Past President, Association of Community Cancer Centers

William S. Rosenberg, MD
Neurosurgeon and Founder, Center for the Relief of Pain, Kansas City, MO
President Emeritus and Founder, Cancer Pain Research Consortium

Howard G. Rosenthal, MD
Professor of Orthopedic Surgery, The University of Kansas Health System, Sarcoma Center
Medical Director of Sarcoma Services

Peter T. Scardino, MD
Chair of Surgery, Chief of Urologic Oncology, Head of the Prostate Cancer Research Program, Memorial Sloan Kettering Cancer Center

George W. Sledge Jr., MD
Professor of Medicine, Chief, Division of Oncology, Stanford University
Past President, American Society of Clinical Oncology

Donald L. Trump, MD, FACP
Founding CEO, Inova Schar Cancer Institute (retired)
Professor of Medicine, University of Virginia (retired)

Terry T. Tsue, MD, FACS
Professor Emeritus
Department of Otolaryngology – Head & Neck Surgery, The University of Kansas School of Medicine
Former Vice President and Physician-in-Chief, The University of Kansas Cancer Center

Alison R. Walker, MD, MPH, MBA
Senior Member, Professor of Oncologic Sciences, University of South Florida, Malignant Hematology MMG Practice Advisor, Moffitt Cancer Center

PATIENT ADVISORY BOARD

Linette Atwood
Cancer Survivor & Patient Advocate

Alan J. Balch, PhD
CEO, National Patient Advocate Foundation & Patient Advocate Foundation

Linda Bohannon, RN, BSN, MSM
President & Chief Executive Officer, Vital Strategic Insights

Brian Garofalo
President, Patient Alliances, LLC

Lisa Greaves
Division Director, Educational Meetings, American Society of Clinical Oncology

Lillie D. Shockney, RN, BS, MAS, ONN-CG
University Distinguished Service Professor of Breast Cancer, Professor of Surgery and Oncology, Johns Hopkins University School of Medicine
Former Adm Director, Johns Hopkins Breast Center
Former Director, Johns Hopkins Survivorship Programs

Doug Ulman
CEO, Pelotonia

Armin D. Weinberg, PhD
Clinical Professor, Baylor College of Medicine
Adjunct Professor, Rice University
Faculty Affiliate, Texas A&M Center for Population Health and Aging
Co-Founder, Intercultural Cancer Council

Offering hope through support

When you hear the words “you have cancer,” you begin a new and unfamiliar chapter of your life. It usually comes as a surprise, without giving you time to prepare for or learn about what is ahead. The first thing to know is that you do not have to go through it alone. Surrounding yourself with support – starting right now – will be one of the most helpful things you can do.

This guide provides a roadmap to show you and your loved ones the many types of support available that will offer help as well as hope. Start building your support system with these important groups.

Your Health Care Team

You will be treated by a multidisciplinary team that is specially trained to help you understand your diagnosis and treatment. Your nurse/patient navigator will be the person who is most familiar with your needs and will serve as your main contact. Ask for their contact information and how best to reach them (phone, text, through the health care portal, etc.).

Various members of the team will help you manage the side effects of cancer and its treatments by drawing on supportive care services. Supportive care is often confused with hospice care, which is reserved for end of life. Supportive care is designed to benefit anyone with a serious or life-threatening illness, and it is available from diagnosis through survivorship. Think of it as “quality-of-life preservation.”

Though most people use supportive care to address the physical side effects of cancer treatment, you, your caregiver and others close to you also have access to a broad range of resources, including mental health, nutrition, fitness, spirituality, financial, pain management, physical/occupational therapy, speech therapy, complementary medicine and others. Ask your doctor, nurse navigator or patient advocate about how to access these services.

Your Inner Circle

You may already have a built-in support system made up of family,

friends, neighbors, colleagues and school contacts, and a spiritual community. Many of them will offer their help in the form of meals, transportation, errands or personal visits. Accept it. You will benefit from their generosity, and they will feel as if they are helping.

Advocacy Groups

Designed to help you learn more about all aspects of your diagnosis, some groups are cancer-specific and others tackle the challenges of any cancer diagnosis. Face-to-face and online groups are available. Many have peer advisors who offer one-on-one support and often have practical advice about how they managed a diagnosis, treatment or side effects. They know how valuable it is to hear from other people who have been in your shoes, and they enjoy giving back and sharing their experiences.

Financial Resources

Cancer can have a significant impact on your finances. Begin by talking with the financial representative at your cancer center and an agent at your health insurance company, then explore the many organizations listed in the back of this guide. They include patient assistance programs for prescription drugs, government agencies, travel and transportation groups that may help with the expenses if you travel for treatment, and much more.

Survivorship Program

Your needs will change as you move through treatment into survivorship. A follow-up plan will help ensure you stay on schedule with appointments that are necessary to monitor for recurrence. Making smart choices regarding nutrition, exercise and lifestyle will help position you for a healthier future. You will continue to benefit from support even as you move past active treatment. Ask your health care team whether a survivorship program is available at your treatment center.

The Cancer Community

Every person whose life is touched by cancer has a unique story. The survivors who have graciously shared their stories in this guide do so because they hope to inspire you to find your own strength as you or a loved one faces a cancer diagnosis. ■

» Meet the 2023 READER SURVEY WINNERS

Each year Patient Resource conducts a reader survey to learn how we can improve the information we provide to patients and their families. At the close of this year's survey, we held a drawing of all the respondents. Two names were drawn at random, and both winners received a \$500 donation made in their honor to the advocacy organization of their choice.

➔ **Congratulations to Brian Ganoë, prostate cancer survivor.** Brian chose the Providence Community Health Foundation in Medford, Ore., to benefit from his donation. On the day of his prostate cancer diagnosis, Brian picked up his first *Patient Resource Cancer Guide* in his diagnosing physician's office. He credits the guide with helping him understand his diagnosis and the questions to ask his surgeon and radiation oncologist.

➔ **Congratulations to Kim Mercier, oncology social worker.** Kim chose Maggie's Wigs 4 Kids in St. Clair Shores, Mich., to benefit from her donation. Kim uses the *Patient Resource Cancer Guides* to provide her patients and staff with trusted information. She calls herself Patient Resource's biggest fan and believes she couldn't do her job without the resources included in every guide.

➔ **Read their full stories here:** PatientResource.com/Reader_Survey_Winners

Mathew Knowles is a male chest cancer survivor. The father of multi-talented superstars Beyoncé and Solange, he credits his positive outcome to early detection. His diagnosis at 67 years old changed his life, and he is committed to raising awareness about this diagnosis and the importance of genetic screening.

Finding gratitude and courage through a cancer experience

As a top sales rep for Xerox Medical Systems in the 1980s, I sold equipment that used cutting-edge technology called xeroradiography for breast cancer detection. Part of the training that helped me teach medical professionals how to use the technology included a brief section about male breast cancer. At the time, I had no idea that training would one day save my life.

Roughly 40 years later, I opened a pack of white T-shirts my wife Gena had bought for me. After wearing the first one, I noticed tiny red dots on it, but they didn't faze me. The next day, after wearing the second one, I noticed them again. I thought perhaps it was ink from the packaging. On the third day, the same thing happened. I told Gena, and she said she'd seen little spots of blood on the sheets on my side of the bed. I remembered from my training that nipple discharge was a symptom of breast cancer, so I immediately called my doctor and told him I needed a mammogram. Never having had a male patient request a mammogram, he wasn't convinced I needed one, but I insisted. The results were concerning, and a biopsy followed. Sure enough, it was cancer.

Fortunately, because it was caught early, it was Stage IA. A trusted friend and my referring physician connected me with an oncologist and a surgeon. Surgery followed by maintenance therapy was the recommendation. I felt comfortable with my medical team and the treatment plan, so, three days later, I had a radical mastectomy to remove tissue from my left breast. With the support of my family and my skilled medical team, my treatment was successful. But, that's not the end of my story.

My surgeon decided to do genetic testing on the tissue removed during my surgery. The results showed I carried the *BRCA2* mutation. I researched my family medical history and made a shocking discovery: I'd lost four uncles to prostate cancer and my grandma, great aunt, aunt and two female cousins to breast cancer.

Because the *BRCA2* mutation can increase the risk of melanoma and prostate, pancreatic and breast cancers, my immediate family got tested. I was relieved to learn that my daughters, Beyoncé and Solange, don't carry the mutation. If I'd known about it before making my treatment decisions, I would have chosen to have a radical mastectomy of both breasts.

I'm cancer-free for now, so I make routine screenings a priority. I have a mammogram as well as MRIs on my prostate and pancreas annually. I keep an eye on my PSA, and I see a dermatologist every two years for a skin check.

I've also made lifestyle changes that have improved my physical and mental health. I eat mainly fruits and vegetables, sometimes with chicken and fish, and I've lost more than 30 pounds. I've reduced my alcohol consumption. I exercise routinely, surrounded by beautiful mountains and the ocean, and I enjoy meditating while I walk.

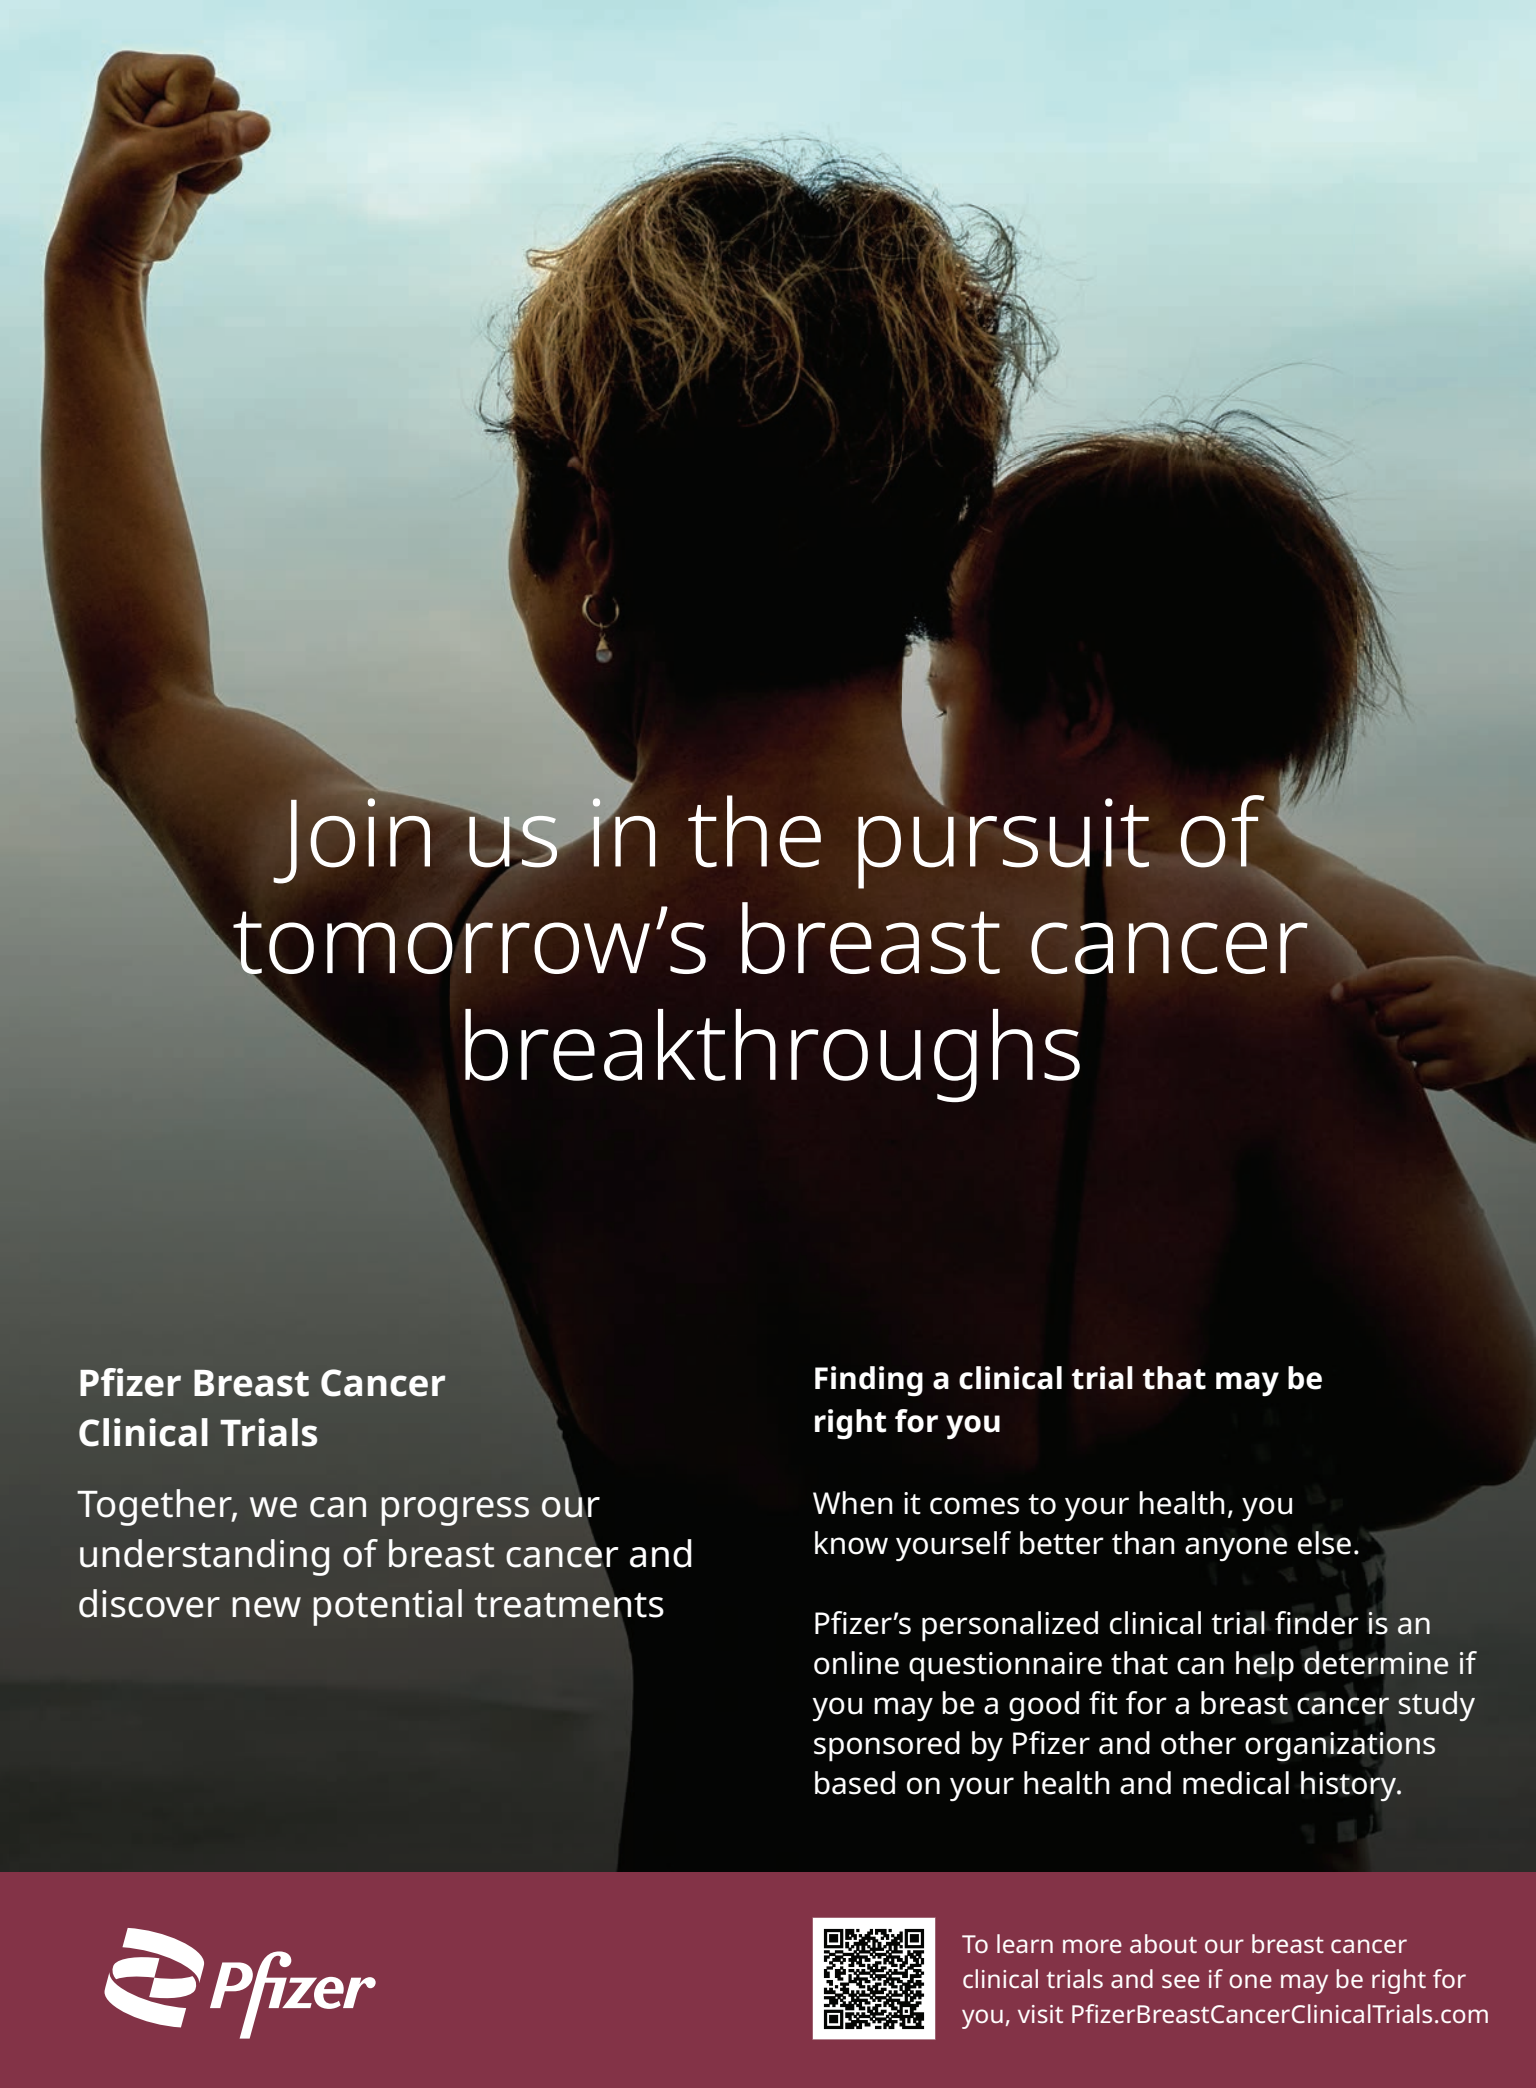

Knowing the genetics of your family is so important. I've told everyone in my family about our medical history. As a public speaker focusing on health and wellness for men, and especially for black men, I emphasize how genetic testing can identify your risk for certain cancers, heart disease and other conditions. And it can be so easy to find out. Sometimes all that is required is a saliva test.

I'm also passionate about how our culture approaches male breast cancer. Personally, I prefer to call it "male chest cancer" because men generally don't refer to our breasts. We call it our chest. I think we can relate better to that terminology.

Society also has a different mindset about chests versus breasts, and that influences how men with this diagnosis are treated. For example, women are given robes to cover up while they await their mammograms. I kindly refused the robe I was offered because it wasn't necessary. I also answered politely when I was asked if I was waiting for my wife at my own appointment. Bottom line, when a man has to open a door marked "Women's Breast Center" for his appointment, it's embarrassing. Though unintentional, I think things like these contribute to men feeling ashamed about having what is traditionally deemed a "woman's cancer."

After my diagnosis, I recalled a chance encounter I had with a nun at LAX. I gave her a donation, and she gave me a card. It encouraged finding opportunity out of adversity. I struggled to see the opportunity in having cancer, but I realize I've been blessed to have a small platform that enables me to bring genetic screening and male chest cancer into the spotlight.

This experience changed my life. I'm so much closer to my family now. Gena and I laugh every night that we're together, and I feel a different level of gratitude that I didn't before. I hope that talking about these important topics gives people the courage to advocate for their own health. ■

Join us in the pursuit of tomorrow's breast cancer breakthroughs

Pfizer Breast Cancer Clinical Trials

Together, we can progress our understanding of breast cancer and discover new potential treatments

Finding a clinical trial that may be right for you

When it comes to your health, you know yourself better than anyone else.

Pfizer's personalized clinical trial finder is an online questionnaire that can help determine if you may be a good fit for a breast cancer study sponsored by Pfizer and other organizations based on your health and medical history.

To learn more about our breast cancer clinical trials and see if one may be right for you, visit PfizerBreastCancerClinicalTrials.com

When Marian Kasey Lancaster learned she had invasive bladder cancer at 73, it was not her first time facing cancer. She had a mastectomy and chemotherapy to treat breast cancer almost 20 years before. In spite of cancer, she is enjoying life with support from her family and online groups, and she is keeping her sense of humor. She encourages other survivors to educate themselves about their disease and reach out for support.

Support and a sense of humor help survivor

While I waited on the table in the exam room for my first cystoscopy, naked from the waist down with a sheet over my lap, I was pretty sure I was facing another cancer. Three urine tests to rule out UTIs and two CT scans had not shown a cause for the occasional blood in my urine over the previous seven months. My sister was by my side, and I was ready to face whatever came.

The tumor in my bladder reminded me of a pink sea creature. I later named her Priscilla, Queen of the Bladder (if you saw the movie *The Adventures of Priscilla, Queen of the Desert*, you might remember the hot pink dress). As lovely as she was, she had to go! The surgery to remove this tumor is called TURBT (transurethral resection of bladder tumor). It is usually an outpatient procedure but does require general anesthesia. My sister had typed up an eviction notice to Priscilla that we taped to my abdomen before the surgery. Fortunately, my urologist had a good sense of humor.

The pathology report showed that Priscilla was high grade and had invaded the lamina propria. After she was removed, I was given intravesical chemo (in the bladder). Because of the high grade, I was also scheduled for another TURBT to make sure there was no tumor in the muscle layer. This second surgery took place five weeks later and was clear. My urologist told me everything looked good, and he felt he had removed all of the tumor.

The next phase of treatment, intravesical immunotherapy with BCG, was delayed a few weeks, which raised my anxiety. The plan was to have BCG treatments once a week for six weeks or more. Several days before my appointment, there was blood in my urine. The doctor assured me it was probably caused by scabs from the last TURBT, so the appointment was rescheduled for a week later. That BCG treatment went smoothly, and I had no side effects or discomfort. The following week was Thanksgiving, so another delay.

The Sunday after Thanksgiving, I started bleeding again. I was told to keep my scheduled appointment later that week, and my urologist performed another cystoscopy. There were five new tumors, so a third TURBT was scheduled. These tumors were also high grade and had invaded the lamina propria.

Because of the aggressiveness of my cancer, I was transferred to a urological oncologist at the cancer center. The hospital where I received my treatment is the only NCI-designated cancer center in my state. I first met my new doctor in January, and we discussed

treatment options. I could have tried the BCG treatments again. However, because of how quickly my tumors recurred, I felt that eventually they would spread to the muscle layer. I decided to have a radical cystectomy – removal of my bladder and urethra – and a total hysterectomy, which was recommended because my cancer was high grade and invasive. For my urinary diversion, I chose an ileal conduit. The surgery was scheduled for mid-February.

The cystectomy and hysterectomy lasted more than six hours, and I faced some challenges as I recovered. My time with a stoma nurse in the hospital was limited, and I had problems with leaking when I got home. This finally was resolved by changing the type of bag. There is a learning curve to being able to change the pouch quickly, but it gets easier with practice. I call my stoma Rosie when she is behaving. When she starts spitting at me, I call her Stella (in reference to the movie *A Streetcar Named Desire*).

The help and support I've received have been invaluable. My sister has been my rock throughout this journey. She is the executive director of Friend for Life Cancer Support Network. She was able to connect me with two other bladder cancer survivors. These women helped me decide what type of diversion I wanted and gave practical suggestions on adjusting to this new way of life. My sister also suggested contacting the Bladder Cancer Advocacy Network (BCAN.org). BCAN is a wonderful organization that provides excellent information on bladder cancer and works to increase funding for research to find new treatments and hopefully, one day, a cure. ■

Marian's recommendations

- ▶ *Get as much support as possible.*
- ▶ *Have someone go with you to appointments and be with you in the hospital as much as possible. I wish someone had been with me when the stoma nurse came by at the hospital.*
- ▶ *Educate yourself about your cancer.*
- ▶ *Contact advocacy groups to find good information, and communicate with other survivors.*
- ▶ *Consider getting a second opinion.*
- ▶ *If you are feeling depressed, get help.*

Dr. Sydney Barned had just begun her medical residency in the United States when she was diagnosed with Stage IV non-small cell lung cancer that was ALK-positive. She was only 33 and had never smoked. After receiving targeted therapy for the ALK mutation, her disease is stable, and she's passionate about recommending biomarker testing for others diagnosed with lung cancer.

➔ *Pay attention to your symptoms:*

IF YOU'VE GOT LUNGS, YOU CAN GET LUNG CANCER

My symptoms started while I was living in Jamaica. I was working in the emergency room and applying for a medical residency in the United States. I have been pretty active my whole life and was an experienced 5K runner. But when I was huffing and puffing like an old man while running and my exercise tolerance was much lower than normal, I knew something was wrong.

A chest X-ray showed a white area at the bottom of the left lobe of my lung. I was diagnosed with walking pneumonia and given antibiotics. It didn't register with me that it could be something more. Later, after treating the pneumonia, I began coughing, and once coughed up blood. I saw a pulmonologist, who repeated the chest X-ray. The white area was still there. He was not very concerned and said we should repeat the X-ray in a month.

I put off the follow-up X-ray because I was in the process of moving to the U.S. for my internship in the District of Columbia. A few months after starting, I began wheezing. I have a strong family history of asthma and suspected I had it as well. I scheduled an appointment with a pulmonologist in the U.S., but I didn't get a chance to see her for another 3 to 4 months.

She ordered another chest X-ray. The radiologist read my results as having a "small lower left lobe consolidation." I knew that an abnormality on chest imaging, in the same spot, so long apart, was not a good thing. I went to my pulmonologist with concerns and requested a CT. The CT showed something blocking part of my airway, which was causing my wheezing. I started to freak out because by then, the white spot had been in my lung for about a year.

The CT also showed a mass so my pulmonologist scheduled a bronchoscopy with a biopsy. The tests confirmed it was cancer. After the initial PET scan, I was referred to a well-known hospital with a Stage I lung cancer diagnosis, and the new doctors ran all of the tests again.

At the second bronchoscopy, the thoracic surgeon removed a few lymph nodes for testing. They were positive for cancer, changing the diagnosis to Stage III lung cancer. When reviewing my PET, my surgeon wanted to do a video-assisted thoracoscopic surgery (VATS) to assess whether cancer was in my pleura.

I was referred to an oncologist with the assumption that I was Stage III and that we would use medication to shrink the tumor

and then do a lobectomy. At that visit, the oncologist told me that the pleural biopsy was positive, upgrading me to locally advanced Stage IV. She also said that they had the tissue samples tested for biomarkers, and I was anaplastic lymphoma kinase-positive (ALK+). She told me I would need to be on targeted therapy for life and would not be able to have children due to the medication toxicity to a fetus. I fell apart crying at the visit.

The doctor offered two possible targeted therapy options. My dad, who is a surgeon, reviewed my options with me. Together we chose the drug that looked like it best protected the brain because lung cancer often spreads there.

That medication controlled my lung cancer for five and a half years. Recent scans showed the cancer had spread to my brain. I switched medications to the other possible option because it is known to cross the blood-brain barrier. I'll continue to get follow-up scans and pray this new medication controls the cancer.

Although facing the brain metastases has been scary, I'm optimistic. I know a lot of people now who have had brain mets and are still alive.

Treatment for lung cancer has changed dramatically in the past few years because of biomarker testing. I think it is very important to get it done immediately at diagnosis because you may be able to go straight to a targeted therapy. I think younger people especially should automatically get biomarker testing.

Support is very important. I've had my mother in New York, my dad in Jamaica, a sister in Trinidad and my husband with me in Maryland. He is constantly there for me and a source of great support. I also found that some Facebook support groups offer a lot of knowledge. Connect with others so that you don't feel alone. Another survivor can offer ideas and suggestions to help because they've likely been in your shoes.

Looking back, I realize that I took my healthy status for granted. I was young and naïve to think that because I didn't smoke that there was no way I could have lung cancer. The stigma associated with lung cancer is stupid. Anyone with lungs can get lung cancer, even people who never smoked. ■

When Owen Weeks was diagnosed with acute lymphocytic leukemia (ALL) at two years old, his mom Hannah quickly learned the value of support. She credits an expert medical team and her family for supporting them as they all worked together to help Owen reach remission.

Find strength in the support around you

Owen's diagnosis didn't come quickly. He was what most nurses and doctors called typical — a toddler with frequent colds, strep throat, ear infections and impetigo (skin infection). It happened so often, though, that I kept taking him in. Finally, an urgent care doctor noticed how pale Owen was and agreed that it might be something serious. He ran blood tests, and Owen's hemoglobin was dangerously low. He was transported by ambulance to a local children's hospital for more blood tests and a bone marrow biopsy. The physician on call happened to be an ALL specialist, and he felt the test results were going to indicate some type of cancer.

At first I panicked, but when they came back with an ALL diagnosis, I was a little relieved. Coincidentally, I was in nursing school and had just finished my pediatric oncology rotation on the same unit where Owen was admitted, and I had some knowledge about ALL. Most importantly, I knew it was treatable.

Right away, the physician presented his plan. We were blessed that there has been enough research on ALL to know what works. He had it all mapped out: the treatment, how long it would last and how to prevent side effects. I felt extremely lucky when I learned he was taking Owen as a patient.

Owen stayed on the unit for a week. His bone marrow biopsy showed that 70 percent of his bone mass was affected, so we had quite a fight ahead of us. Treatment was aggressive. A port was placed, and we started weekly IV chemotherapy and steroids. He had lumbar punctures to drain spinal fluid and intrathecal chemotherapy to prevent cancer cells from spreading into his brain. He took oral chemotherapy nightly and meds to prevent pneumonia, neuropathy and nausea.

My mom moved in to help so I could finish school and keep Owen out of day care. The risk of infection was too high. His chemotherapy made him immunocompromised, and he was often neutropenic.

Because I gave him some meds at home, the medical team stressed the importance of taking them correctly. It took a lot of coordination. I marked them off on my calendar to help me remember when I gave them. For example, each month had a "Steroid Week" labeled on it. Having the right tools helped it become part of our daily schedule.

We started some routines that allowed Owen to feel grounded and safe during treatment. He liked a 3...2...1 countdown before a needle poke, and he kept his eyes open. He also practiced deep breathing and sat on my lap whenever possible during treatments and visits with his doctor.

Having the same nurse for every treatment helped. Nurse Brandi gave Owen nearly every dose of his IV chemotherapy. He liked to be involved, so she showed him how to flush and clean his port and they did it together. To make sure he felt secure, a hospital therapist checked on him throughout treatment.

Owen also had a chemo duck, a stuffed animal for kids with cancer. Quackers had a port, too, and Owen liked to play doctor and "work" on him.

Treatment lasted almost three years. Because he was so young, it didn't really change Owen's way of life. There were a few restrictions, like not playing certain sports, eating raw foods and having a cat. I wanted him to have a safe activity, so when he was old enough I enrolled him in ballet.

During treatment, I was consumed with taking care of Owen. I found it much harder to cope post-treatment. Once the doctor told us the cancer was in remission and we could get back to normal life, I had to figure out what that was supposed to look like. During active treatment, I felt like we were doing everything we could to make a difference, but after, I thought about the "what ifs." I felt depressed and anxious. Seeing a therapist has helped.

Now, at 7, Owen enjoys school, his friends and our two cats. He is deciding between soccer and basketball. I'm an ICU nurse, and my mom, who was inspired by our experience, still lives with us while she studies to become a nurse practitioner.

My advice to parents is to be strong. I struggled to get answers for Owen, and I wish I would have been more insistent. We are here to advocate for our children. I am grateful for the urgent care doctor that listened to me and to our amazing medical team.

Today, we stay on schedule with follow-ups, keep an eye on Owen's blood levels, and have an occasional echocardiogram because of potential heart-related long-term effects. He will have follow-up appointments for the rest of his life. He doesn't mind, though, because it means, in his words, "that I don't have to be sick. They can help me." ■

Explore All Treatment Options

Now enrolling children and adolescents for an Ewing sarcoma treatment study.

About the Study

The Pfizer A5481092 study is comparing the effectiveness of the study medicine palbociclib when taken in combination with chemotherapy medicines irinotecan (IRN) and temozolomide (TMZ) versus IRN and TMZ chemotherapy alone for the treatment of Ewing sarcoma.

Who Can Participate?

This study may be an option for children and young adults who:

- Are 2 to 20 years old
- Have been diagnosed with recurrent or refractory Ewing sarcoma
- Have not received prior treatment with a CDK4/6 inhibitor

There are other requirements to join this clinical study. A study team member will help determine if this study is right for you or your child based on all participation criteria.

Learn More

To learn more or connect with a member of the study team, please visit www.EwingSarcomaStudy.com or call **800-887-7002**. If you are a physician interested in referring a patient, please call **833-751-4343**.

Firefighter fought cancer and won

Diagnosed with testicular cancer and follicular lymphoma 17 years apart, Joe Schumacher credits “the big man upstairs” and his oncology teams for saving his life. Today, he is cancer-free and spends his time giving back by volunteering for the Firefighter Cancer Support Network and the Leukemia & Lymphoma Society.

People often think that firefighters die because of fighting fires. But, evidence shows that the majority of firefighter deaths are caused by cancer. Being a firefighter for 30 years, I understood a lot of the risks of this profession, but I didn’t expect to get cancer. Part of my life’s mission now is to ensure that no firefighter should have to face cancer alone.

In 1996, my two-year-old daughter ran into me in a man’s sensitive area. It hurt more than usual and continued to hurt for days. Two weeks later while seeing my doctor, I mentioned the pain in my testicle. He was concerned and ordered an ultrasound. After reviewing the results, he told me he suspected cancer but wouldn’t know for sure until I had surgery to take a closer look.

The surgeon found that I had Stage I non-seminoma testicular cancer that had encapsulated my right testicle. He removed the testicle and checked lymph nodes in the area. None were positive for cancer. I followed surgery with 17 radiation treatments to prevent a recurrence. After that, I was cancer-free until 2013 when while showering one morning, I noticed a lump on the left side of my groin.

When the lump didn’t go away within a week, I called my doctor. Thinking it was an infection, he gave me antibiotics and said to come back if there was no change in 10 days. There wasn’t, so I returned to him. He recommended I see a general surgeon and get an ultrasound. The surgeon performed a needle biopsy, and results showed I had a type of non-Hodgkin lymphoma. Further testing clarified it as Stage I follicular lymphoma. The good news was it had only been found in one lymph node, which was removed. I followed that with another 15 radiation therapy treatments, and today, I am cancer-free.

When I was diagnosed with the second cancer, I did what many people do and went to the internet. I learned that the number one type of cancer among firefighters is testicular cancer, and the incidences of non-Hodgkin lymphoma are higher for them than for the general population. I wanted to find someone I could talk to about this shocking information.

That’s when I found the Firefighter Cancer Support Network. Its mission is to assist firefighters and EMS providers and their immediate families facing a cancer diagnosis by offering badge-to-badge support, training and guidance. The group starts by providing newly diagnosed members with a blue tub full of hanging files to store all of the important information they will receive and a book about understanding cancer survivorship. The badge-to-badge support is the cornerstone of the organization. It pairs firefighters with other firefighters who have had the same type of cancer.

I wanted to help, so I joined the network. I served as assistant state director for Virginia before becoming the state director for Virginia. Today, I am the chief operating officer.

I retired from firefighting in 2018 and now focus on teaching other firefighters through the network how to better protect themselves from the chemicals and carcinogens they could potentially be exposed to while working. I also volunteer and raise funding for The Leukemia & Lymphoma Society. Giving back feels good.

I know I am incredibly lucky to have survived both cancer diagnoses. I think the big man upstairs was looking out for me and guided me to the best physicians and nurses to treat me. I was also surrounded by the support of my family and friends. After the second diagnosis, the fire chief looked me in the eye and said, “Don’t worry about your job. Your priority is to get better.” I feel so lucky and blessed to have had this level of support.

When you are first diagnosed, remember that cancer is not an automatic death sentence. The science and treatments are continually improving. And, there are modifiable risk factors that you can control to reduce your chances of getting cancer. Some of these include eating healthy, using sunscreen, getting enough sleep and reducing your alcohol intake.

I ask trainees and experienced firefighters to think about making these choices and frame it in this context: What are your health and your life worth to you? Do you want to walk your daughter down the aisle some day or see your grandchildren? If so, these are the choices you have to make. Tomorrow is not guaranteed.

If you are a firefighter diagnosed with cancer and you are not sure whom to contact, reach out to the Firefighter Cancer Support Network at www.firefightercancersupport.org. They can give you the support you need — you do not have to go through cancer alone. ■

At 49, Shelly Polak was healthy and in shape when she began to have symptoms that resembled a stroke. Then, they quickly went away. After it happened a second time, her husband rushed her to the hospital. Testing showed she had Stage IV melanoma. Faith in her doctor, support from her family and treatment with immunotherapy helped her overcome it. Today, she shows no evidence of disease and is living life to the fullest.

Survivor credits doctor, family and immunotherapy with saving her life

Sometimes cancer doesn't show up like you expect. My husband Jim and I were on a fishing trip, and we visited a gift shop. As I looked around, I began to feel very strange. My arms and feet suddenly felt like they were floating. My vision started phasing in and out. I became disoriented and felt like I was going to pass out. I grabbed onto Jim's arm and he helped me out of the store. As we drove back to our condo, the feeling wore off.

The next day, I was at the grocery store when suddenly I couldn't feel my hands or legs. Everything slowed down, including my walking and my speech. As soon as I got in the car, I called my husband. He knew immediately something was wrong because of the way I was talking. He told me to stay in the car and he'd come get me.

Our condo was just across the street from the grocery store, and I wanted to get the car back home before my husband arrived. I rolled down the windows, drove the car into the condo's parking lot and stayed in the car. Five minutes later, Jim scooped me up out of my car, put me in his truck and rushed me to the hospital.

The ER doctor asked me a battery of questions: Had I been drinking or doing drugs? Was I pregnant? My answer was no to everything. They ran tests and an MRI. They feared I was having a stroke. While in the hospital, the symptoms eased, and I slowly came back to normal.

When about six or seven doctors walked into my room together to give me the test results, my heart sank. Seeing that many doctors with dreadful looks in their eyes, I knew it had to be bad.

They found multiple cancerous tumors in my brain. They thought one had pushed on a nerve that sends signals to my hands and legs, which caused the strange feelings I had, but they couldn't be sure. They also discovered a bump in my groin area that I didn't even realize was there. At the time, they did not know the origin or type of the cancer. They suspected the cancer started somewhere, then spread to the lymph node in my groin and traveled right up to my brain.

I went into complete shock. I felt like I became a whole different

person. My life was turned upside down.

They kept me in the hospital and ran more tests. The next day, they confirmed it was melanoma, and I started treatment a few days later. The strangest part was that even though they searched me from top to bottom, they never found a lesion. I suspected it was a mole on my abdomen, but when biopsied, it was not malignant, so we will never know.

The oncologist on duty that day in the ER became my doctor, and I still see him today. I am so grateful for him. He has a very straightforward nature and tells me exactly what's going on. He told me if I didn't do any treatment, I had about three months to live.

My first treatment was immunotherapy and an anti-seizure medication. After treatment began, I developed a major migraine that wouldn't go away, had severe neck pain, became very emotional and would nod off during conversations. The doctors said these were side effects. After they adjusted my medication, they thankfully went away.

Over the next few months, scans showed the tumors were shrinking.

After two years of immunotherapy, the scans and blood work showed I had no evidence of disease. I have finished treatment but remain diligent about keeping up on my MRIs and follow-up appointments. I am so grateful for immunotherapy. It saved my life. I knew in the beginning I didn't want chemotherapy or radiation to my brain. Hearing that immunotherapy was an option was like seeing sunshine.

Throughout everything, my family provided a ton of support. My oldest sister sent me a card in the mail every day for two years straight while I was in treatment.

Regardless of the type of cancer you have, do your research. Be an advocate for yourself. It's ok if you don't agree with your doctor, but look for one that listens to you and treats you as one of the family. Take care of your body even when you don't feel like it. Eat healthy, including a lot protein to counteract muscle loss, and go for walks.

My doctor encouraged me to feed my body, mind and soul. Today, I feel great and look forward to the future. ■

Financial resources available for patients & families

➔ **Following are the names and contact information** of organizations that offer financial assistance, or that have links to organizations that may provide such help, to people affected by cancer. Organizations are listed by the type of help they provide. Your oncology social worker, hospital patient services representative, local cancer organization and local United Way can guide you to additional sources of financial assistance.

Treatment facilities by state

Disclaimer: A list of cancer treatment centers in the U.S. can be found on pages 16-33. The expanded listings (information found in yellow boxes) on these pages is a description of services which are paid for by the facilities themselves as advertisements. Full-page advertisements are allowed in this section as well. The publication of advertisements, where paid or not, is not an endorsement. If medical or other expert assistance is required, the services of a competent professional person should be sought.

Turlock

Emanuel Cancer Center & Stanford Medicine Emanuel Radiation Oncology Center

Location: 880 E. Tuolumne Road, Turlock, CA 95382

Phone: 209-664-2434

Website: EmanuelCancerCenter.org

Nearest Airport: Sacramento International/Fresno Yosemite International
Accreditation/Designation: Joint Commission; American College of Radiology accredited for breast ultrasound, mammography and stereotactic breast biopsy

Cancer Specialties/Special Services: Emanuel Cancer Center offers comprehensive cancer care and patient-focused treatment in medical oncology, radiation oncology — through our collaboration with Stanford Health Care — and a full-service women's imaging center. We offer advanced technology, an infusion center, laboratory and support services including patient navigation, counseling, nutrition, a wig room and support groups.

Baptist Health, Delivering Excellence in Cancer Care

Baptist Health is once again recognized by U.S. News & World Report as one of the best healthcare systems in the nation for cancer care. Miami Cancer Institute was recognized as a high-performing oncology program — which puts us in the top 10 percent of leading cancer centers in America. Within five years of opening our doors, our team of healthcare professionals has led us to this incredible recognition.

The Eugene M. & Christine E. Lynn Cancer Institute and Miami Cancer Institute both received high-performing ratings in colon cancer surgery.

We are honored by these recognitions, but we are most satisfied that our commitment to providing clinical excellence and exceptional care has earned your trust.

Having cancer is tough. Now, treating it is easier.

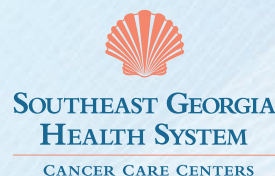

Southeast Georgia Health System is the first cancer center in Georgia to use the next-generation CyberKnife® M6 with MLC technology, a fast, effective treatment option for cancer.

- CyberKnife treats prostate, lung, breast, brain, pancreatic and liver cancers.
- Precise targeting delivers high doses to the tumor and spares surrounding tissue.
- Treatments take as little as 15 minutes and can be completed in one to five sessions.
- This outpatient, non-invasive procedure means no anesthesia, no pain, and little to no recovery time.

For more information, call **800-537-5142 ext. 5149**
or visit sghs.org/CyberKnife.

Providing the best cancer care for Percy isn't just for Percy.

When we see a cancer patient like Percy, we also see everyone who loves them. Our relationship extends to those folks as well. It's for them as much as patients like Percy that we do absolutely everything we can to provide the most comprehensive, leading-edge care.

To schedule an appointment, call **913-588-1227**, or visit **KUCancerCenter.org** to learn more.

Siteman Cancer Center at Barnes-Jewish Hospital and Washington University School of Medicine

Location: 660 South Euclid Avenue, Box 8100, Saint Louis, MO 63110

Phone: 314-747-7222; toll free 800-600-3606; fax 314-454-8051

Website: siteman.wustl.edu

Nearest Airport: St. Louis Lambert International Airport

Accreditation/Designation: NCI-designated Comprehensive Cancer Center and member of the National Comprehensive Cancer Network

Cancer Specialties/Special Services: Washington University subspecialists at Siteman Cancer Center are national leaders in stem cell transplantation and cellular therapies, gynecologic oncology, brain tumors, sarcoma, cardio-oncology and many other services. Siteman also has one of the nation’s largest clinical research programs; which offers innovative, therapeutic treatments for patients with cancers that were previously considered untreatable.
